

SKEDCO Micro Hauler

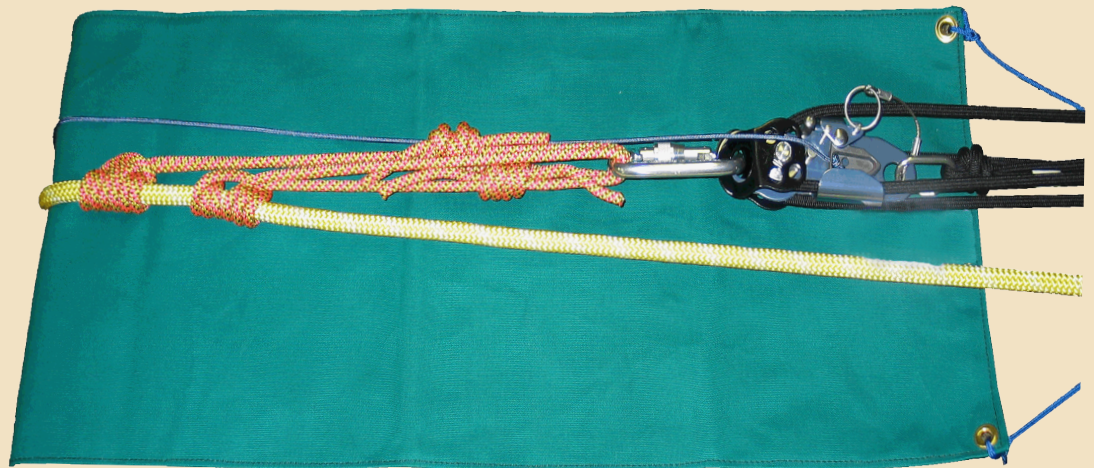

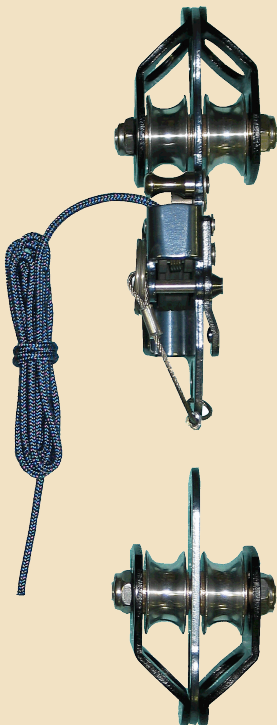

This is a miniature Rescue Hauler that measures only six inches in length by 2 inches in width. It features one inch pulley sheaves.

When used with its matching double pulley, it gives you from 1:1 to 5:1 mechanical advantage. They can be stored together pre-rigged in a small bag ready for immediate deployment.

Unrigged Micro Hauler will fit in a pocket or small pouch. The Micro Hauler and pulley together weigh only 12.5 ounces.

Currently, the Skedco Micro hauler is being used (pre-rigged) in military applications.

*Piggy back systems allow attachment to the victim's rope to raise him to safety.

Micro Hauler is also used for pick-offs, line transfers and inchworm systems for moving large victims in horizontal confined spaces.

When attached to the foot end of the SKED[®] or basket litters, it is used to take the litter from horizontal position to completely vertical and back to horizontal as often as necessary with very little effort.

These are just a few of the many uses for a Micro Hauler. Its uses are only limited by the user's imagination.

Micro Hauler's compact size and 7,000 pound break strength makes it an absolute must for any rescue kit.
