SKEDCO WINDOW RAPPEL ANCHOR

PATENT PENDING

SKEDCO Window Rappel Anchor SK-765

Skedco's unique anchor design allows escape from burning buildings where there are no other anchors available. This is your "Last Chance Bailout" device. It will fold to be carried in a holster or bailout kit. When used, the ends are extended, a carabiner is placed into the holes in both parts. The anchor is placed into the lower corner of a window and a rope is attached.

It is necessary to keep tension on your rope to prevent the anchor from slipping out of position. This anchor keeps your rope farther away from the flames which gives you a little more time to descend to safety.

Measure in 5" x 6" x 5/8". MBS 5,000 lbs. Available in Red or Black. Made in USA.

The kit is available in black, all items will be in black except for the rope.

Skedco Escape/Bailout kit SK-790

This kit is designed for escape from fire environments and/or disabled construction and service equipment.

Technora® decomposes at 900 deg (500°C). It is usable at 390°C for long periods of time and maintains half of its strength at 482°C.

If there is no anchor available, insert the window anchor into the lower corner of a window at approximately a 45 degree angle. Maintain tension on the rope and anchor to prevent it from slipping out of place. Climb out the window and rappel to a safer place.

DANGER: Failure to maintain tension on the rope attached to the window anchor could allow the anchor to move out of place resulting in injury or death. It is extremely important to train with this kit prior to putting it into use in a real escape situation. It is the user's responsibility to train on and understand the use of this equipment.

ALWAYS USE A SAFETY LINE (BELAY) WHEN TRAINING ON THIS DEVICE.

Available in Orange or Black. Made in USA.
