

Inspired by the most rigorous demands of our elite military medical groups, this medical bag system is both durable and flexible, suitable for use by military, paramedics, field medic, smoke jumpers, search and rescue units, and any person with need for a really tough bag. The system is modular, with internal components which are removable and transferable. The external bags come in two styles. The Sked-Pak<sup>™</sup> I is a heavy duty backpack which is designed to use with the standard Military Alice pack frame and is designed specifically for use in parachute jumps. It comes complete with an integral single point release mechanism and leg straps necessary for jumping safely. The Sked-Pak<sup>™</sup> II is a lighter duty bag which can be carried by the handle like a suitcase, but also includes concealed straps for use as a backpack. The internal components of both bags are identical, and the kit components can be removed as a unit for re-supply, or transferred quickly from bag to bag. A second removable insert can be purchased to enable instant re-supply. All components can be ordered separately, for replacement of lost parts or to keep kits pre-packed, ready for rapid replacement in a field environment. Available in International Coyote Brown, ACU, Orange, O.D. Green, or Black. All internal components are black. Made in USA.

## SKEZ-PZK [ (Jumpable), The Egan Ruck

The Sked-Pak<sup>™</sup> I Jumpable Medical Ruck includes a sewn-on single point release and removable leg straps to meet the technical requirements for use by a parachutist. This design eliminates the need for the traditional "H" harness. When released the pack drops on a lowering line for personnel safety on landing. It includes outer storage pockets, two canteen pockets, and a removable accessory pack which can be attached on the top or bottom. A second accessory pack can be purchased to increase storage capacity. Compression straps, leg straps, and release mechanism are included with each bag. The compression straps prevent loss of equipment should the zipper burst on impact. Coil zippers are used throughout the bag, allowing sliders to be pulled back over a popped zipper, making it good as new. The Sked-Pak™ I includes all internal components described on the opposite (next) page. It does not include a pack frame or canteens. A Camelbak can replace the 2-qt canteens. A soldier can live from two to four days out of this ruck and still carry all necessary medical equipment. Military personnel and other jumpers are encouraged to contact Skedco for complete information regarding parachute jumping provisions of the bag.

SK-1100-xx Sked-Pak™ I Jumpable Medical Ruck NSN 6530-01-472-4889

Pictured here is the bottom of the Sked-Pak<sup>™</sup> I. It reveals the single point release configuration. All components attached to either the top or of the single point release system are included with the bag, including the leg straps. No "H" harness is needed to jump this ruck.

One personal gear accessory pack comes with each Sked-Pak™ I. It can be bottom of the Sked-Pak I. An additional accessory pack can be purchased and the two accessory packs attached top and bottom to provide additional storage.

The Sked-Pak™ I fits the standard Army Alice pack frame, making it unnecessary for military personnel to incur the cost of purchasing a different kind of pack frame.

# SKed-P2K II, Egan Bag

The Sked-Pak<sup>™</sup> II is a simpler alternative to the Sked-Pak<sup>™</sup> I, for those who do not require the jumpable bag or storage for personal gear. The Sked-Pak<sup>™</sup> II has the same internal dimensions and components as the Sked-Pak<sup>™</sup> I. This bag has a handle, which allows it to be carried like a suitcase, as well as stowable/concealed shoulder straps which allow it to be worn as a backpack. The Sked-Pak<sup>™</sup> II is ideal for ground based or civilian medic, as well as air, water or ground ambulances. Since the removable main compartment is identical to the Sked-Pak<sup>™</sup> I, a single insert could be stocked and transferred from bag to bag for resupply as dictated by field conditions.

SK- 1106

The complete main body insert (SK-1112) is designed to fit into both Sked-Pak<sup>™</sup> I and Sked-Pak<sup>™</sup> II. Placed between the lid and the main compartment is a detachable airway management pouch (SK-1105), which has a clear non-glare plastic on one side and sewn pockets with elastic on the other. This pouch allows storage of all airway management equipment. The main body insert (SK-1103) of the Sked-Pak<sup>™</sup> along with the Removable insert divider (SK-1104) is re-configurable for any user; Doctors, PA's or medical corpsmen. It can carry up to six IV units, several dressings and battle packs, or can be reconfigured to hold two standard "D" cylinders of oxygen, with plenty of room for regulators, hose and BVM. Each Sked-Pak<sup>™</sup> also includes a heavily padded drug/syringe kit (SK-1106). Extra inserts can be purchased to allow for rapid re-supply of kits.
